

I made a
KNIFE!

CHEVRON ENVY

TANTO POINT (*MOD)

SCANDI GRIND (*MOD)

NOTES: this design is a bit of an off-shoot from a traditional tanto point as the tip angles upward, similar to a trailing point. Grinding the "swedge" along the spine is optional.

KNIFE FACT #660: Obsidian blades are so sharp (3 nm thick) that, on a cellular level, obsidian knives will cut between cells rather than tear the cells as steel knives would do.
